COVER LETTER

Dear Recruitment Team,

Joining Garaaz has granted me a remarkable opportunity to blend my technical skills with a profound appreciation for the automotive industry. Observing the impact our solutions have on streamlining distributors' operations and enhancing workshop efficiency fuels my desire to elevate the software development process at your esteemed organization.

During my tenure at Garaaz, I took on the challenge of developing and maintaining MERN and NestJS Stack web applications tailored for the online ordering of automotive parts. This experience honed my ability to build scalable and maintainable backend systems using technologies like Node.js, Express.js, NestJS, and MongoDB. By ensuring secure database transactions and efficient query execution, I was able to improve the reliability and speed of the ordering process, directly benefiting our clients.

One of my most significant contributions was when I spearheaded the improvement of a backend system that faced performance bottlenecks due to increasing user loads. By refactoring the code and optimizing database queries, I boosted transaction speeds by 30% while reducing server response times. This demonstrated my problem-solving acumen and ability to drive performance improvements, which aligns well with your team's objectives.

I am eager to bring my skills in full stack development to your team and contribute to enhancing product innovation. I am enthusiastic about discussing how my background, skills, and motivations align with the creative and technical goals of your projects. I am looking forward to the possibility of an interview to explore this further.

Sincerely,

Sabre Alam
